

Spring Semester Examination – 2018

Paro College of Education

Royal University of Bhutan

Paro

Module: MAT 404 (Mathematics in Upper Primary 2) **Programme B. Ed (P)** **Level: IV**

Writing time: 3 hours

Full marks: 100

Direction:

Do not write during the first 15 minutes. Use this time for reading the questions. You will get full three hours for answering the questions. Write the answers to all the questions in the answer sheets provided. This paper contains SIX questions. All questions carry equal marks and the intended marks are given in brackets. Attempt any FIVE questions. You are NOT allowed to use any electronic devices such as calculators, mobile phones etc. You will be supplied with necessary grid papers such as Isometric dot grid and graph papers to answer some of the questions.

Question 1

- a. There are 60 people and all play at least football or basketball or both. 45 play football and 40 play basketball. What is the probability that someone chosen at random:

i. play both football and basketball?

ii. play only football?

iii. play only basketball? [2 + 2 + 2]

- b. Find the values of x , y and z from the figure below. Show all justifications and calculation. [6]

- c. Draw the object using isometric dot paper. You are provided with top view, front view and right view of the same object. Draw any one view of the object. [8]

Front View

Top View

Right View

Question 2

- a. The coordinates of the figure ABCD are A(-2, 3), B(1, 3), C(1, 2) and D(-2, 2). [2+5+3]
- Plot the figure ABCD and write its coordinates.
 - Rotate the figure ABCD by 90° clockwise to $A'B'C'D'$.
 - Reflect the image $A'B'C'D'$ to $A''B''C''D''$ in the X-axis.
- b. Factor $4x^2 - 9y^2$ by using: [4 + 6]
- algorithm
 - algebra tiles

Question 3

- a. Prove that $\triangle ABC \cong \triangle DCE$. Explain, illustrate and calculate wherever necessary.[4]

- b. The coordinates of the figure PQR are P(-1, 1), Q(-5, 4) and C(0, 4). [2 + 2 + 2]
- Plot the figure PQR.
 - Reflect the figure PQR in the axis $x = 2$.
 - Translate the reflected image $P'Q'R'$ according to the mapping function $P'(x, y) \rightarrow P''(x - 2, y - 7)$.
- c. Two dice are rolled. What is the probability that: [3 + 3 + 2 + 2]
- the sum is odd?
 - the product is even?
 - the difference of the two is 2?
 - product is not multiples of 3?

Question 4

- a. i. Derive the formula to find the surface area of an open box. [8+2]
ii. Using the derived formula, find the surface area of an open box whose length is 5m, width is 3 m and height is 4m.
- b. i. Frame a question to construct an acute angled isosceles triangle using ASA postulate. [2]
ii. Construct the above triangle with all the steps and explain wherever necessary. [8]

Question 5

- a. i. Derive the formula to find the surface area of a closed cylinder. [6+2]
ii. Find the surface area of a closed cylinder whose height is 20 m, and the radius of the top and bottom is 7m.
- b. Draw the following picture using Y-axis as the axis of reflection. [6]

- c. Show or derive that $x^2 - y^2 = (x - y)(x + y)$. [6]

Question 6

- a. A number is chosen at random from the set of two-digit numbers from 10 to 49 inclusive. What is the probability that:
- [8]
- the number contains at least one digit 2?
 - multiples of 3 and multiples of 4?
 - multiples of 2 or multiples of 5?
 - factors of 50?
- b. 5 cards are selected at random. If a winning hand is two red Jacks and 3 diamonds, what is the probability of winning? [6]
- c. There are 4 plots with the following dimension. All the plots are in the urban area. Choose one plot to construct a house. Explain why you chose that particular plot. Your answer has to be logical and mathematically correct. [6]
